13. Other:			٠
	·		

Continuation of 11, does NOT place the application in condition for allowance because: Applicant's arguments are contradictory in that first statements are made that the edge barrier referred to by the Examiner in the '525 patent does not cover "a portion" of the fabric edge. Then on page 3 of the comments from the response submitted 4/13/07, the Applicant agrees that "a portion" of the edge is covered by the barrier. Thus, the main argument is solely on inhibiting adhesions. There also was comments about both the Meier and Mulhauser references not suggesting the barriers disclosed in the patents have adhesion resistant properties. The Examiner clearly provided logical reasoning that the references can suggest the material for the edge barrier have this property since the materials are solid. It is well known in the prosthetic art that tissue promoting materials are not solid. Applicant's arguments state the prior art do not provide suggestion on the structural characteristics of the mateirals for the barriers. However, Applicant's disclosure provides no description of structural characteristics of a material that would inhibit adhesions. Because the Patent & Trademark Office does not have the testing facilities to provide factual evidence needed to establish that the claimed invention or subject matter is not inherent, the examiner had attempted to shift the burden to the Applicant but has not received any factual evidence of the prior art materials by the Applicant testing these to show they do promote adhesions. The Examiner does acknowledge the arguments or points referred to by the declaration discussing adhesion resistant materials and also the new documents cited in the response submitted herein. However, these are all irrelevant since none the subject matter presented in the declaration or in the NPL documents to describe a material that would promote adhesions was originally present in Applicant's disclosure. Additionally as mentioned above no factual evidence has been presented that the prior art materials were tested to show they do promote adhesions. In summary, Applicant's arguments are not persuasive.
